Inspect, Test, Rework and Report

NetSuite Quality Management

Designing, manufacturing, distributing and selling a product of high quality doesn't happen by accident, it requires a company-wide commitment to enforce policies and standards. NetSuite's Quality Management solution has been designed to help you deliver the highest quality in your products with minimal overhead regardless of the size and complexity of your business and product line.

Key Benefits

- Formalize quality policies, standards and practices.
- Improve product quality.
- Initiate quality activities from business transactions.
- Work with large volumes of raw data sets.
- Collect in-process and incoming inspection results.
- Compare to pass/fail criteria.
- Integrated non-conformance reporting.
- Reduced cost of quality.

Inspections

The inspection record defines exactly what it is that you want your quality engineer to check. These inspection records can be re-used so, for example, you only have to create a "check for material certificates" inspection once—these are later grouped into specifications that are then applied to items, etc. There are currently two main types of inspections that are supported.

With qualitative inspections, the inspector can verify that the item is in good overall condition or verify that the appropriate certificates are in place.

Quantitative inspections, on the other hand, allow you to define multiple measurable elements along with criteria for acceptance, i.e. diameter, width, length, temperature or even chemical composition.
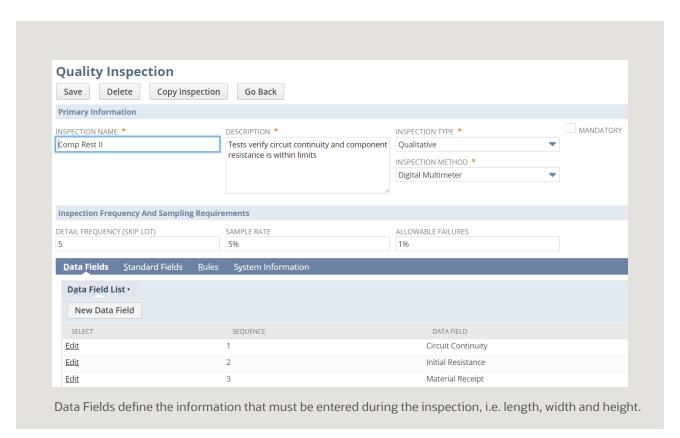

Skip Lot, Sample Size and Failures

Within each inspection, you can also specify how many items need to be inspected and define rules for inspecting specific sequences of lot or serial tracked items. Failures then define how many of the inspected units can fail inspection before the inspection itself is failed—kicking off the non-conformance workflow.

As an administrator, you are able to distinguish sample data from summary or aggregate data and control whether sample data should be recorded in NetSuite or stored externally, allowing you to easily work with larger volumes of raw data sets.
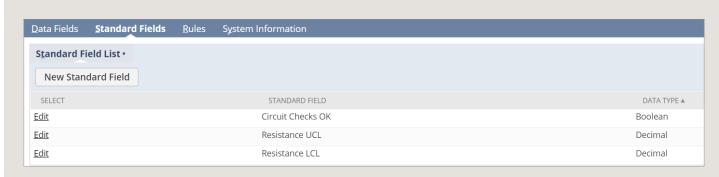

Test Definition

Each inspection can be set up with multiple data elements that define the parameters of the inspection process.

Primary Information

INSPECTION NAME *
Comp Rest II

DESCRIPTION *
Tests verify circuit continuity and component resistance is within limits

INSPECTION TYPE *
Qualitative

MANDATORY ☐

INSPECTION METHOD *
Digital Multimeter

Inspection Frequency And Sampling Requirements

DETAIL FREQUENCY (SKIP LOT)	SAMPLE RATE	ALLOWABLE FAILURES
5	5%	1%

Data Fields   Standard Fields   Rules   System Information

Data Field List ·

New Data Field

SELECT	SEQUENCE	DATA FIELD
Edit	1	Circuit Continuity
Edit	2	Initial Resistance
Edit	3	Material Receipt

Data Fields define the information that must be entered during the inspection, i.e. length, width and height.

Standard Fields

Data Fields	**Standard Fields**	Rules	System Information		

Standard Field List •

[New Standard Field]

| SELECT	STANDARD FIELD	DATA TYPE ▲
Edit	Circuit Checks OK	Boolean
Edit	Resistance UCL	Decimal
Edit	Resistance LCL	Decimal

Standards fields are then established to define how the data field should be compared to a standard.

Rules

Data Fields	Standard Fields	**Rules**	System Information		

Rule List •

[New Rule]

SELECT	SEQUENCE	RULE	DATA FIELD	COMPARISON	STANDARD FIELD ▲
Edit	1	Circuit Continuity Rule	Circuit Continuity	Equals	Circuit Checks OK
Edit	2	Initialial Resistance Rule UCL	Initial Resistance	Less Than Or Equal To	Resistance UCL
Edit	3	Initial Resistance Rule LCL	Initial Resistance	Greater Than Or Equal To	Resistance LCL

Rules then establish how the data field entries should be compared to the standard and determine pass/fail.

Specifications

The specification record groups related inspections to establish quality activities. So, for example, when receiving some raw materials, you might confirm dimensions as well as verify that the appropriate certification is present. Additionally, the specification record allows the user to:

- Associate specifications to item/vendor/ location combinations.

- Define inspection frequency via settings for skip-lot, sampling and more.

- Define conformance rules that establish when an item fails an inspection.

- Display error messages that describe where and why updates failed.

Automatic Triggering of Inspections

Based on item/vendor/location associations, NetSuite item receipt transactions are monitored and can initiate inspection activities with different rules for each.

Assign Inspections

## Inspector Assignment

Once an item has been identified as requiring inspection, an entry is made into the inspection queue where an individual quality engineer can be assigned to perform the task. Workflows can be utilized to automatically assign inspectors based on location, vendor, inspection type, etc.
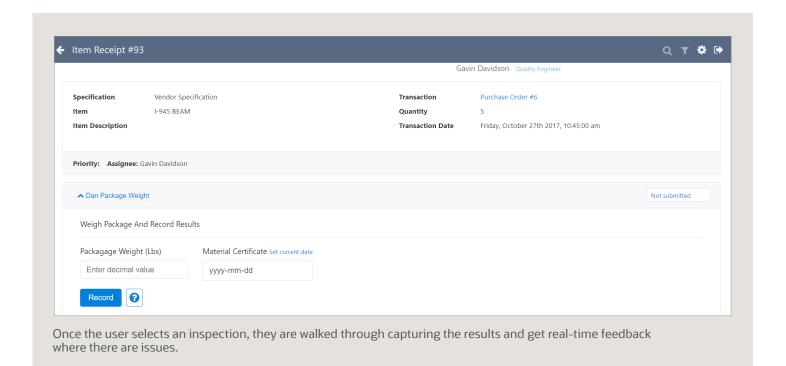

Perform Inspections via Tablet

The quality tablet interface enables quality engineers to perform inspections, review standards, record data and submit data for analysis directly from the inspection area providing real-time feedback and instant access to test results.

Perform Inspections via Tablet

Item Receipt #93

Gavin Davidson — Quality Engineer

Specification	Vendor Specification	Transaction	Purchase Order #6
Item	I-945 BEAM	Quantity	5
Item Description		Transaction Date	Friday, October 27th 2017, 10:45:00 am

Record

Once the user selects an inspection, they are walked through capturing the results and get real-time feedback where there are issues.
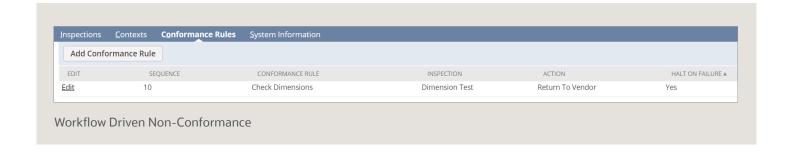

Workflow Driven Non-Conformance

Quality failures, or non-conformances, can drive additional activities within NetSuite through customizable workflows—the application provides initial workflows for:

- Quarantine and Release

- Initiation of Vendor Return Authorizations

Roles

The system comes with three distinct roles that are assigned to existing users:

- Quality Administrator: Responsible for setup and maintenance of quality specifications, context checks and workflow.

- Quality Manager: Responsible for monitoring and managing quality execution and reporting.

- Quality Engineer: Responsible for quality data collection.

Inspections	Contexts	**Conformance Rules**	System Information

Workflow Driven Non-Conformance

Ready To Implement An ERP?

1 **Choose a Strong Partner**
Partnering with someone who has years of experience implementing ERPs and is there long after the sale.

2 **Choose the Right Tool**
Speed up your processes, gaining accuracy on your reports and build a stronger business all with one tool.

3 **Your Commitment**
Getting your team on-board and running on all Cylinders takes buy in and commitment.

Why Choose goVirtualOffice?

NetSuite Solution Provider for 15+ years
100+ NetSuite Implementations
700+ NetSuite Projects
Consultants 20+ Years of Industry Experience
Our team has over 30 NetSuite Certifications

Our Track Record:

Customer Retention - 98% (A+)
Currently supporting 2,000+ users
45+ Industry Experts Employed
NetSuite's Partner Advisory Board
NetSuite's Commerce Advisory Board
